Experiment No. 4: Verification of System Properties: Linearity, Time Invariance, Causality and Stability

OBJECTIVE:

(i) To verify the linearity and time-invariance properties of continuous-time and discrete-time systems using suitable input signals and system responses.

(i) To verify the linearity and time-invariance properties of continuous-time and discrete-time systems using suitable input signals and system responses.

Expected Outcomes

- Determine whether the selected system satisfies homogeneity and additivity.
- Verify whether delaying the input produces the corresponding output delay.
- Distinguish linear/time-invariant and non-linear/time-varying behavior.
- Support the conclusion using plots and numerical error..

Software / Laboratory Environment :

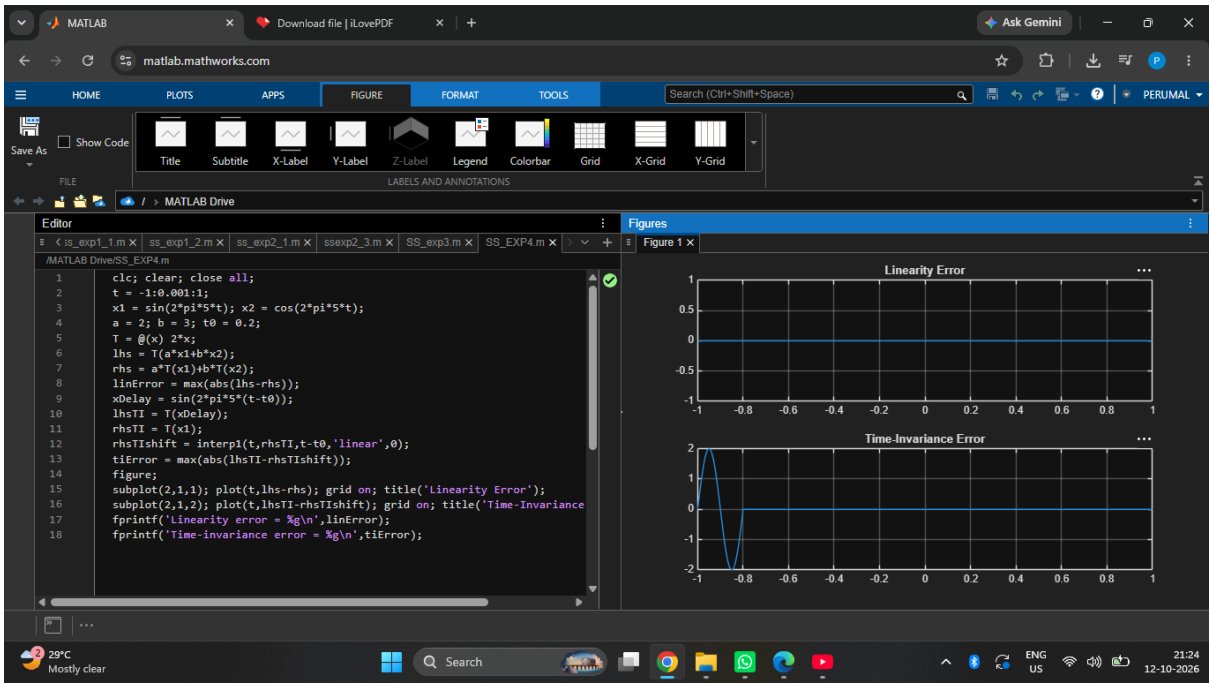

MATLAB

MATLAB Coding:

```
clc; clear; close all;
t = -1:0.001:1;
x1 = sin(2*pi*5*t); x2 = cos(2*pi*5*t);
a = 2; b = 3; t0 = 0.2;
T = @(x) 2*x;
lhs = T(a*x1+b*x2);
rhs = a*T(x1)+b*T(x2);
linError = max(abs(lhs-rhs));
xDelay = sin(2*pi*5*(t-t0));
lhsTI = T(xDelay);
rhsTI = T(x1);
rhsTIshift = interp1(t,rhsTI,t-t0,'linear',0);
tiError = max(abs(lhsTI-rhsTIshift));
```

```
figure;
subplot(2,1,1); plot(t,lhs-rhs); grid on; title('Linearity Error');
subplot(2,1,2); plot(t,lhsTI-rhsTIshift); grid on; title('Time-Invariance Error');
fprintf('Linearity error = %g\n',linError);
fprintf('Time-invariance error = %g\n',tiError);
```

OUTPUT:

RESULT :

The system properties were successfully verified and classified. Linearity, time invariance, were analyzed. The results confirmed the system behavior for practical applications.

Objective	Assessment Criterion	Excellent – 4	Good – 3	Satisfactory – 2	Needs Improvement – 1	Weightage	Marks(10)	Marks obtained
(i) To verify the linearity and time-invariance properties of continuous-time and discrete-time systems using suitable input signals and system responses.	**Linearity Verification (Homogeneity & Additivity)**	Correctly applies the homogeneity test and the additivity test (or the combined superposition test) to every CT and DT system. Chooses suitable input signals and scaling constants, compares the two responses accurately, and concludes linear or non-linear correctly.	Applies the linearity tests correctly to most systems, with minor errors in the choice of inputs, algebra or comparison.	Performs a basic linearity test (only one of homogeneity or additivity, or only some systems) with noticeable errors, and needs guidance.	Unable to apply or interpret the linearity test.	**20**	2	

	Time-Invariance Verification (Time-Shift Test)	Correctly applies the time-shift test, comparing the response to the shifted input with the shifted output for every system. Handles systems with time-scaling or time-varying coefficients correctly and concludes time-invariant or time-varying correctly.	Applies the time-shift test correctly to most systems, with minor errors in shifting or comparison.	Performs a basic time-shift test with noticeable errors (for example shifting only the input or only the output), and needs guidance.	Unable to apply or interpret the time-invariance test.	**20**	2	
	MATLAB Implementation & Numerical Verification	Writes correct MATLAB code with suitable time and index vectors to generat	Code, plots and numerical comparison are correct, with minor errors in	Code runs but has noticeable errors in vectors, shifting or error calculation, and needs	Unable to implement the tests or produce meaningful responses and plots in	**20**	2
